

Packaging in the

# PARTS industry

 **AUDION**  
Packaging Machines

## Secure production. Protect components. Optimize performance

In the automotive, electronics, and high-tech industries, packaging is an integral part of the quality standard. Components must be protected against dust, moisture, corrosion, vibration, and mechanical stress — often in heavy-duty production environments with strict regulations, high output demands, and increasing automation.

### Audion Solutions

Audion delivers robust, reliable packaging solutions designed for demanding industrial environments. Our high-performance machines ensure consistent seal integrity, reliable product protection, and seamless integration into automated production lines — accelerating throughput, and ensuring operational continuity.

- **Power Sealers:** Heavy-duty sealing - time/temperature controlled to fully validatable.
- **Continuous Band Sealers:** Fast, reliable sealing for high throughput production;
- **Speedpack Baggers:** Compact bagging systems for parts, optimized for efficiency;
- **Vacuum Packaging:** Reduce package volume, protect against corrosion & damage;
- **Shrink Wrap Systems:** Secure bundling and professional product presentation;
- **Custom Engineered Solutions:** Tailored integration for unique industrial requirements.

### Why Choose Audion?

Audion's industrial packaging solutions are engineered to protect components, optimize production processes, and perform reliably in demanding industrial environments:

- **Protection:** Strong seals & vacuum options prevent damage, corrosion, contamination;
- **Efficiency:** High speed automation reduces manual work and boosts output;
- **Durability:** Built for heavy-duty, long-term industrial use;
- **Reliability:** Stable performance with minimal maintenance, maximum uptime.
