

42I MGMISDS

The Sealmaster Magneta® series consists of a complete range manually operated impulse sealers with different sized models and options. This user friendly and safe machine is ideal for packing small and medium sized series. The machine can work with pre-made bags as well as with tubular foil. When working with tubular foil, the machine can produce various length bags by using the integrated shielded cutting device.

The 42I MGMISDS is a stainless steel sealer with a 5 mm industrial seal and the upper and lower bar. The sealing wire is fastened with tensioners to prevent distortion.

The sealing cycle of the machine can easily be started by pushing down the seal bar by hand or by using an optional foot pedal. Once started the magnetic bars remain closed throughout the sealing and cooling cycle and then automatically open, ready to make the next seal. The machine is suitable to seal polyethylene, polypropylene and thin laminates and cooling times are adjustable.
