
ROLLBAGS

Pre-opened bags on a roll.

Our Rollbag bags are designed to run on ALL automatic bagging machines that use pre-opened bags on a roll. These bags come perforated on a roll with one side open for easy insertion of your product while the bag is still attached to the roll and bag dispenser. We can also manufacture them to be fan-folded in a box for easy loading and reduced changeover time.

Bag on a roll features:

- Bag width: 50 mm- 630 mm
- Bag length: 50 mm – 1830 mm long
- Bag thickness: 30-150 micron
- Printing: up to 8 colors
- Features: depending on the application (headers, vent holes, hang holes etc.)
- Materials: Rollbags are typically made out of a specially-enhanced linear low density polyethylene (LLDPE) blend. However, they can also be made out of a variety of other materials, including high density polyethylene (HDPE), coextruded (COEX) polyethylene, polypropylene, nylon, anti-static and biodegradable.

SPECIFICATIONS

Product	Rollbags
Bag/roll length	50 mm - 1830 mm
Bag/roll width	50 mm - 630 mm
Type of film	LLDPE, HDPE, COEX, PE, PP, Nylon, Anti Static, Biodegradable
Thickness of film	30-150 micron
Type of package	Rollbag
