

VDT 6080

The dip tank is mainly used in the food industry. Food is often packed in a shrink bag or in a vacuum bag. When using a vacuum chamber with a dip tank both methods are combined. Special vacuum shrink bags are therefore required.

After vacuum packaging, the product is placed into the dip tank, with hot water filled, for a few seconds. During this bath, the special vacuum shrink film will retract the plastic surplus film around the product. Resulting in a better looking packaging, as well as a reduced packaging volume.

SPECIFICATIONS

Product	VDT 6080
Seal length	-
Seal width	-
Type of machine	Diptank
Model	Floor
Covering	Stainless Steel
Knife	Option
Pedal operated	No
Type of film	Vacuum Shrink Bags
Thickness of film	2 x 100 micron
Type of package	Bag
Branche/Application	Food Industry
Type of product	Solid
